Super Awesome Research

Superawesome Researcher Fellow
Civil and Environmental Engineering, University of Strathclyde

University of Strathclyde Engineering

Introduction

Research Overview

This is body text using **Meta OT Normal**. This font should be used for all body copy in designed materials.

Important points can be emphasized using **Meta OT Bold** within the body text.

This is a callout using ClanOT Medium for highlighting key information.

Motivation

Why This Research Matters

Regular body text provides detailed explanations using Meta OT Normal. This ensures consistency with University brand guidelines. Key findings and **bold statements** use Meta OT Bold for emphasis.

Results

Key Findings

Detailed results are presented in Meta OT Normal, ensuring readability and brand consistency.

Significant outcomes are highlighted using Meta OT Bold within the text flow.

Conclusions

Future Directions

Concluding remarks in Meta OT Normal complete the research narrative.

Methodology

Our Innovative Approach

Phase 1: Data Collection

Body text explaining the methodology in detail. The combination of Meta OT for body copy and ClanOT for headings creates a clear visual hierarchy. You can also include some citations of relevant literature [1].

Phase 2: Analysis

"Bold insights require bold typography" — quotations and callout text use ClanOT Medium or Bold.

Continued explanation in regular body text...

This is a highlighted message box using the main colour (In this case, the light blue for the Faculty of Engineering). It can be used for key messages or to draw attention to important information. The text is white for contrast.

Validation

Quality Assurance

Body text with mathematical notation: $E = mc^2$

The fonts work seamlessly with equations and technical content while maintaining brand identity.

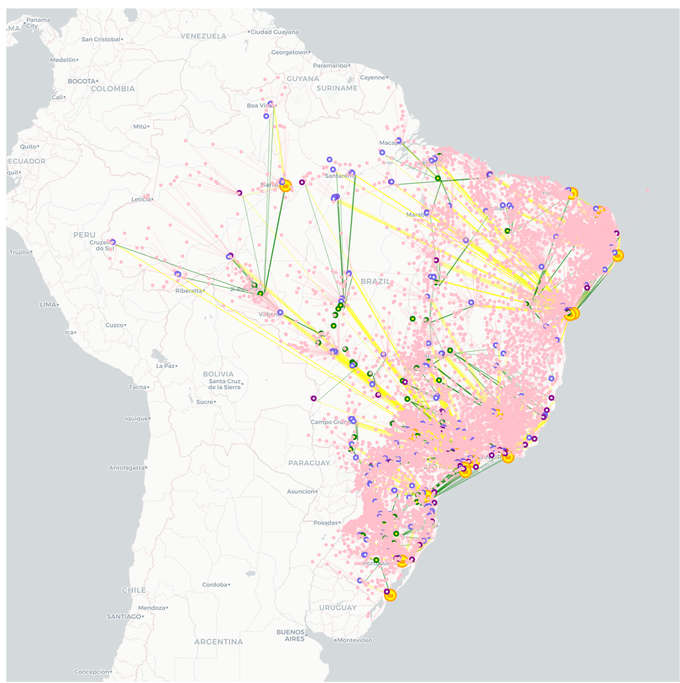

Figure 1: Map flows

Discussion

Impact: Using ClanOT Black for dramatic emphasis on single words or short phrases.

Followed by explanatory body text in Meta OT.

You can also include figures in the poster, as in Figure 2 below.

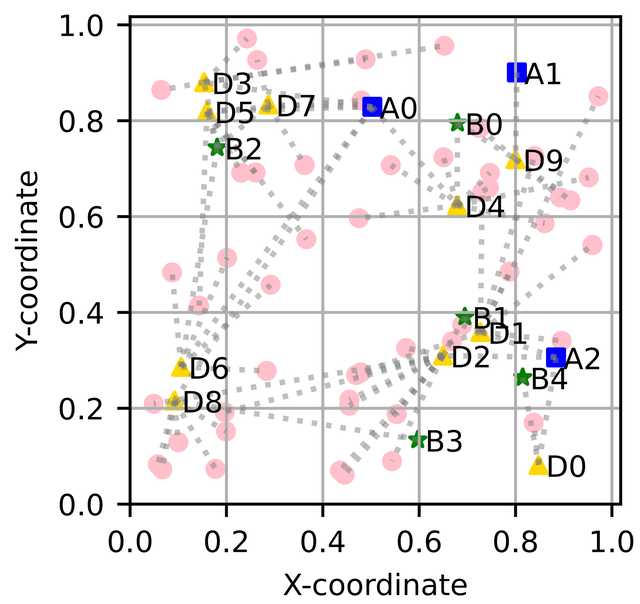

Figure 2: Example image

Funding: This research was funded by the Super Awesome Research Council (SARC) under grant number 123456. We would like to thank SARC for their support and funding, which made this research possible.
